READING 2 (Items 5–10)**(6 marks)**

Read the text. Then complete the task.

Global warming is a serious problem for the sea life. The change of the water temperature and the rise of the sea level can be very harmful for the sea creatures. Scientists think that global warming is mostly caused by human activity.

Glaciers are large sheets of snow and ice that are found on land all year. They are found in places like the western United States, the mountains of Europe and Asia. As water gets warmer by global warmer *glaciers* on land melt and add more water to the oceans.

Rising of the sea level is a threat for many sea animals like polar bears, penguins and seals. These animals use the ice as a home to live in and when there isn't enough snow, these animals will extinct.

Global warming is also a big problem for turtles. The rise of the sea level reduces the space of beaches, so turtles will have a problem in laying their eggs. Therefore, they might travel for longer distances and die.

It also has an impact on Coral reefs. The release of CO₂ from global warming and the reduction of oxygen affect the coral reefs and they become weak or dead.
